

# Deep Space, and Distant Worlds... *in Your Space!*

The Webb Space Telescope is yours to share. Developed in collaboration with NASA scientists, engineers, and media specialists, the Webb Augmented Reality (AR) App allows viewers to get a closer look at Webb!

Using this cool tool, anyone with an iPhone or iPad can experience the world's most advanced scientific instrument in just about any space you'd like, including your own. In augmented reality, you can place a full-sized, virtual model of the Webb telescope in your own backyard.

The Webb Space Telescope heads to space later this year, but you can download the Webb AR App immediately. It's available for free at the Apple App Store today!

Get your **Webb AR App** by using the QR Code or visit:
