EXPANDING THE FRONTIERS OF SPACE ASTRONOMY

Big Data and Bigger Communities at MAST

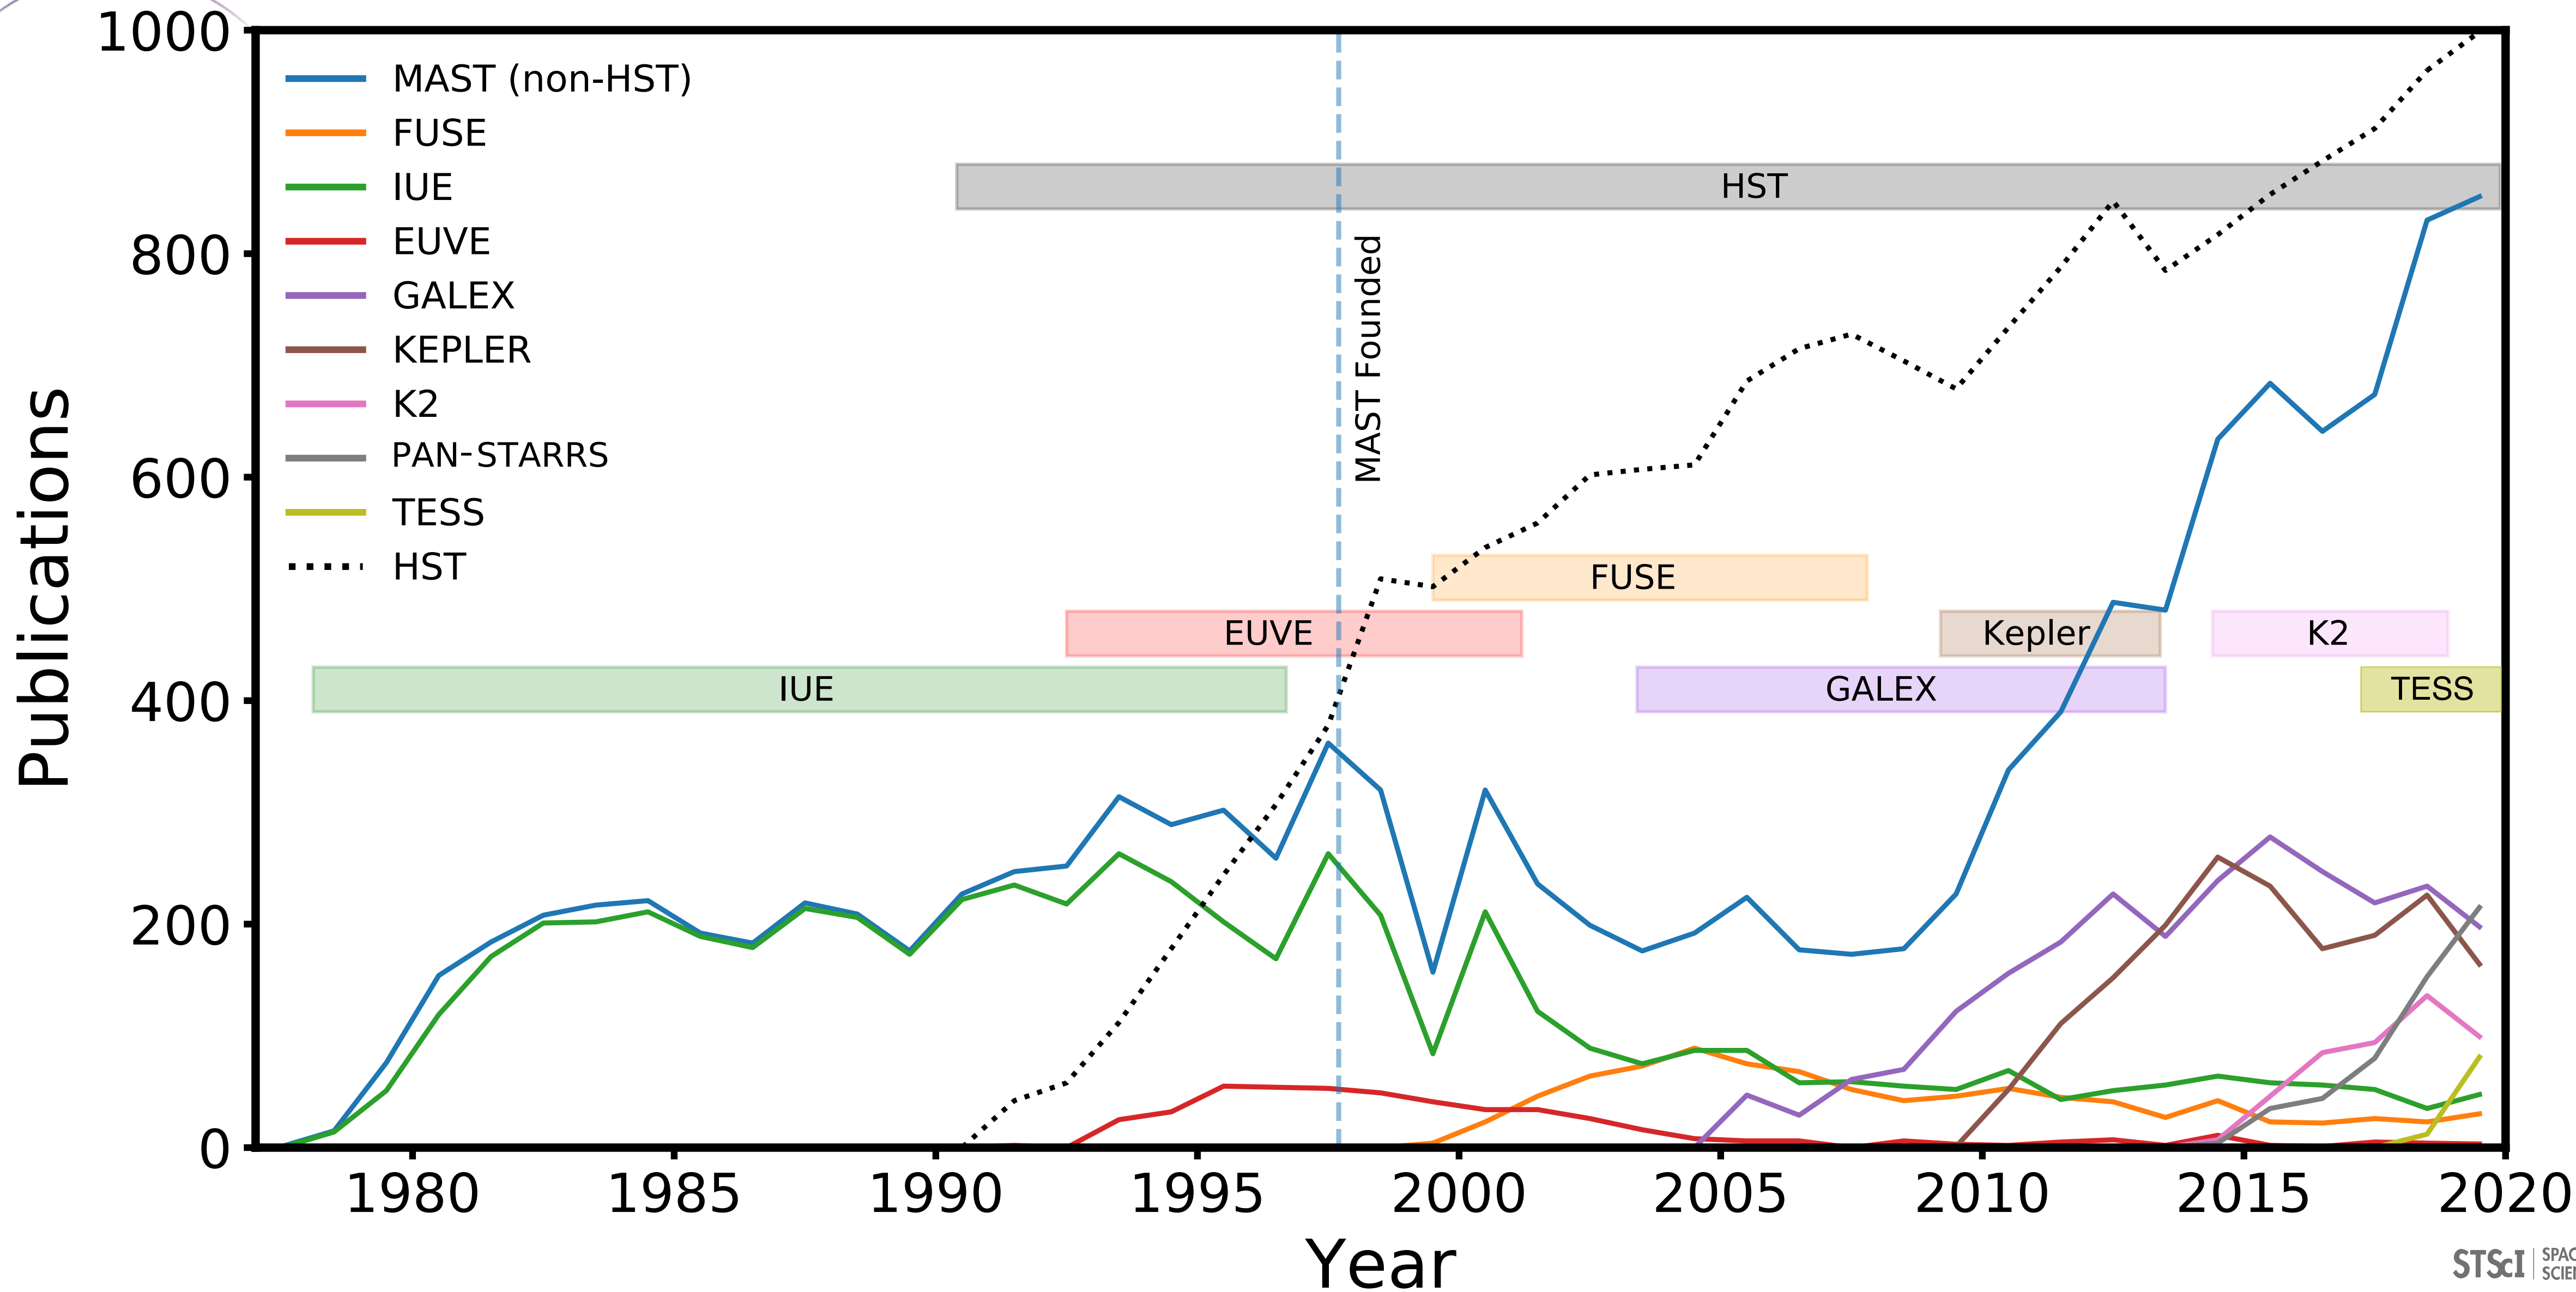

Josh Peek

Principal Investigator,

Mikulski Archive for Space Telescopes

The astronomical community is making amazing use of MAST

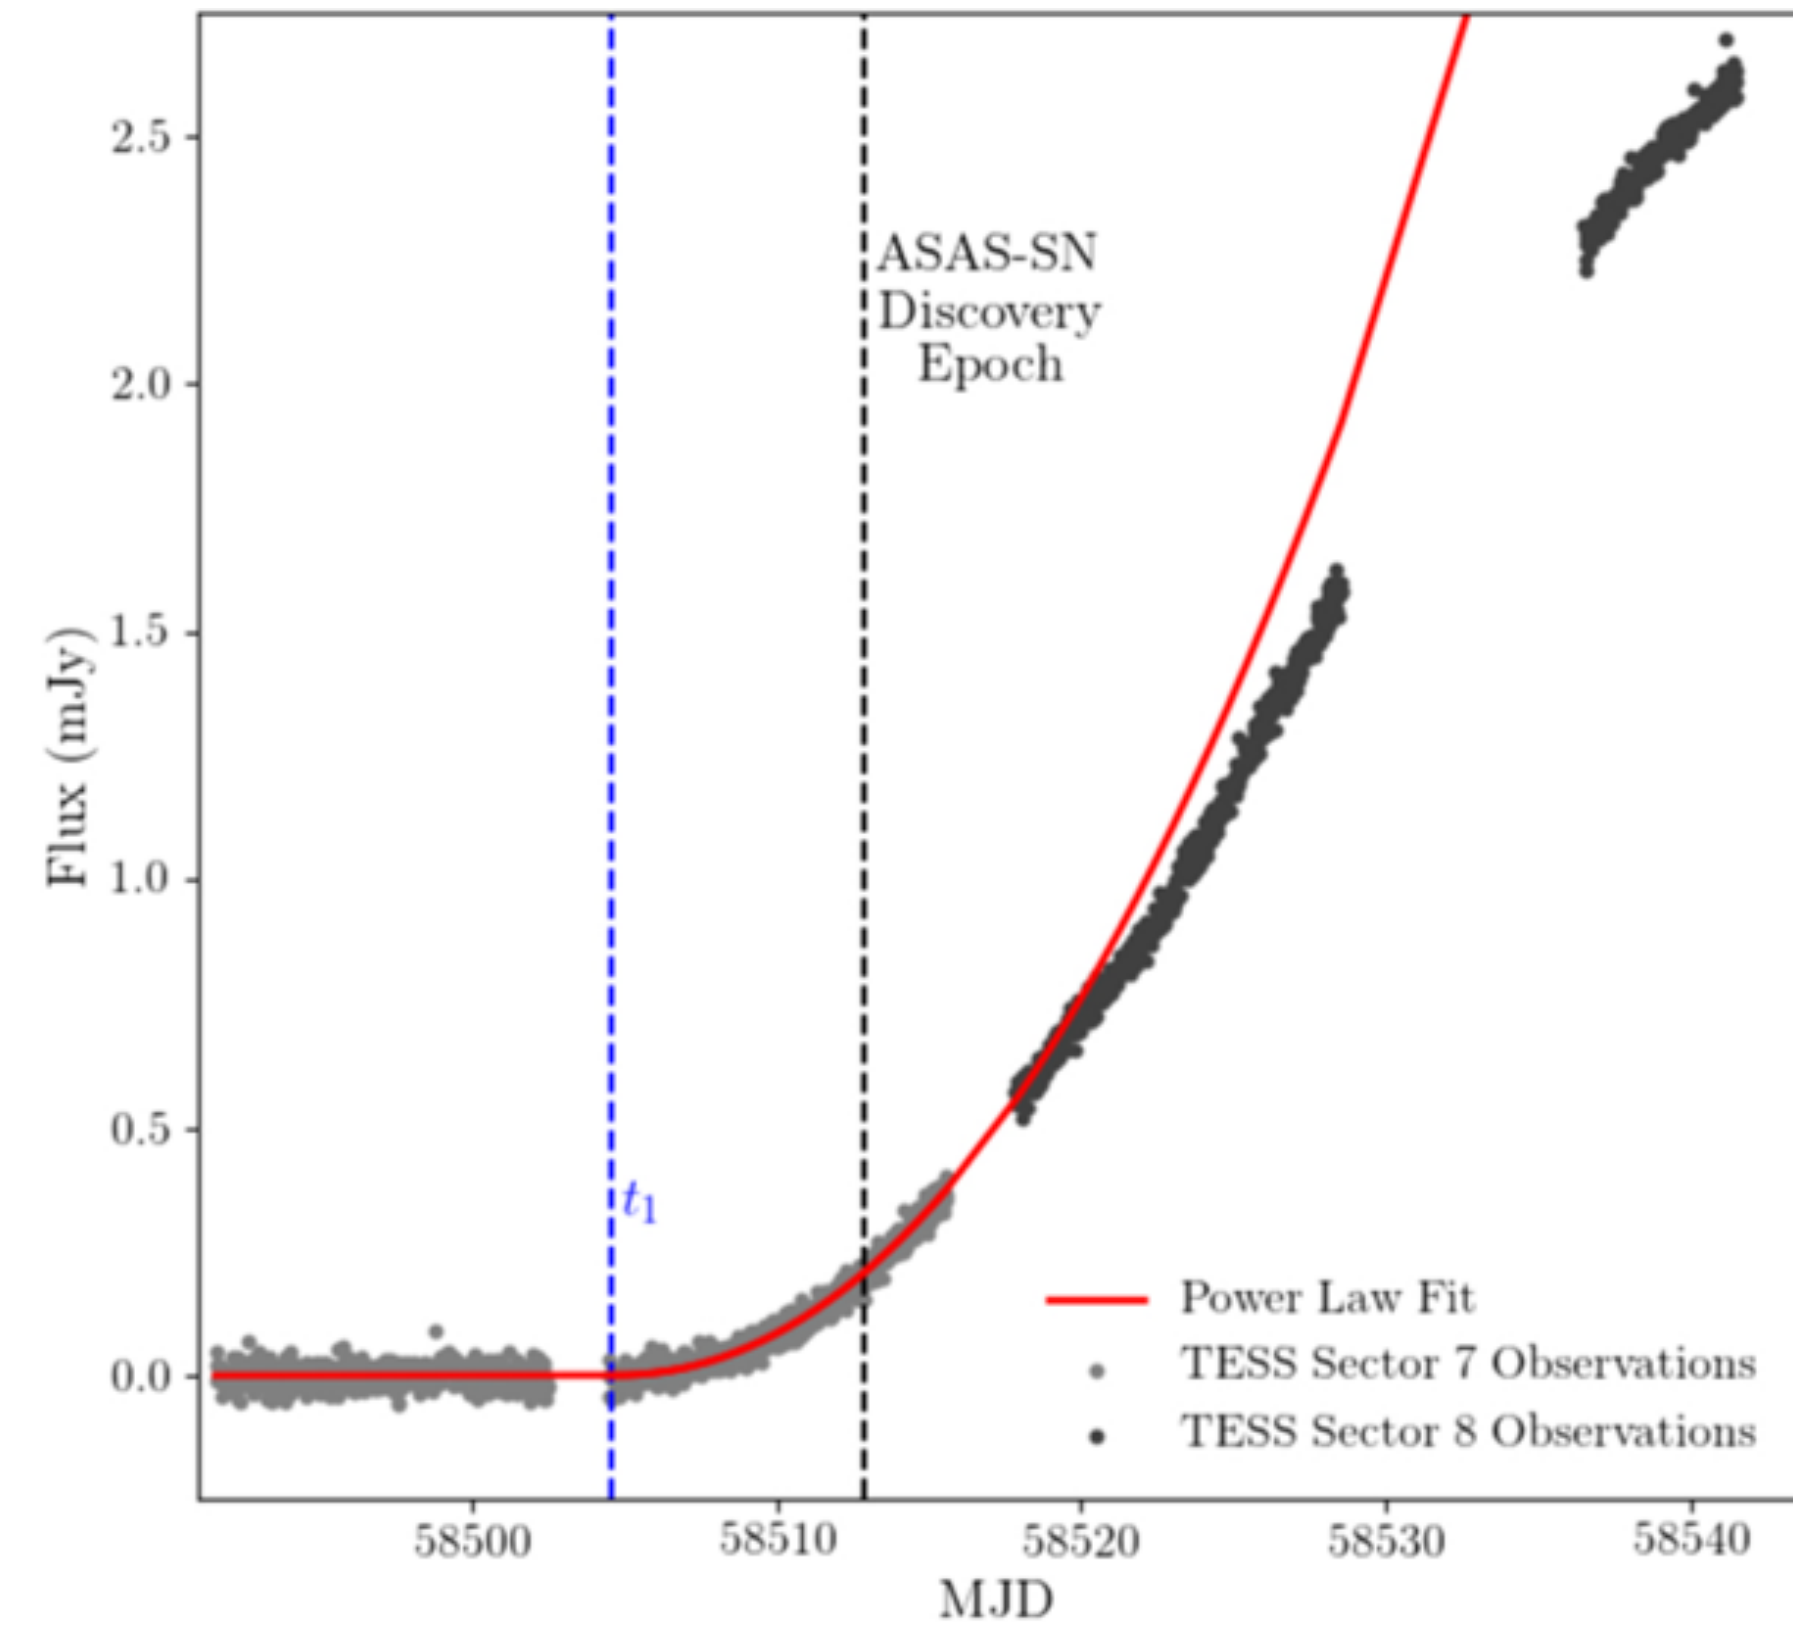

MAST provides data for a huge range of science

Comprehensive Spectral Energy Distribution Templates of Active Galactic Nuclei

Brown+ (2019)

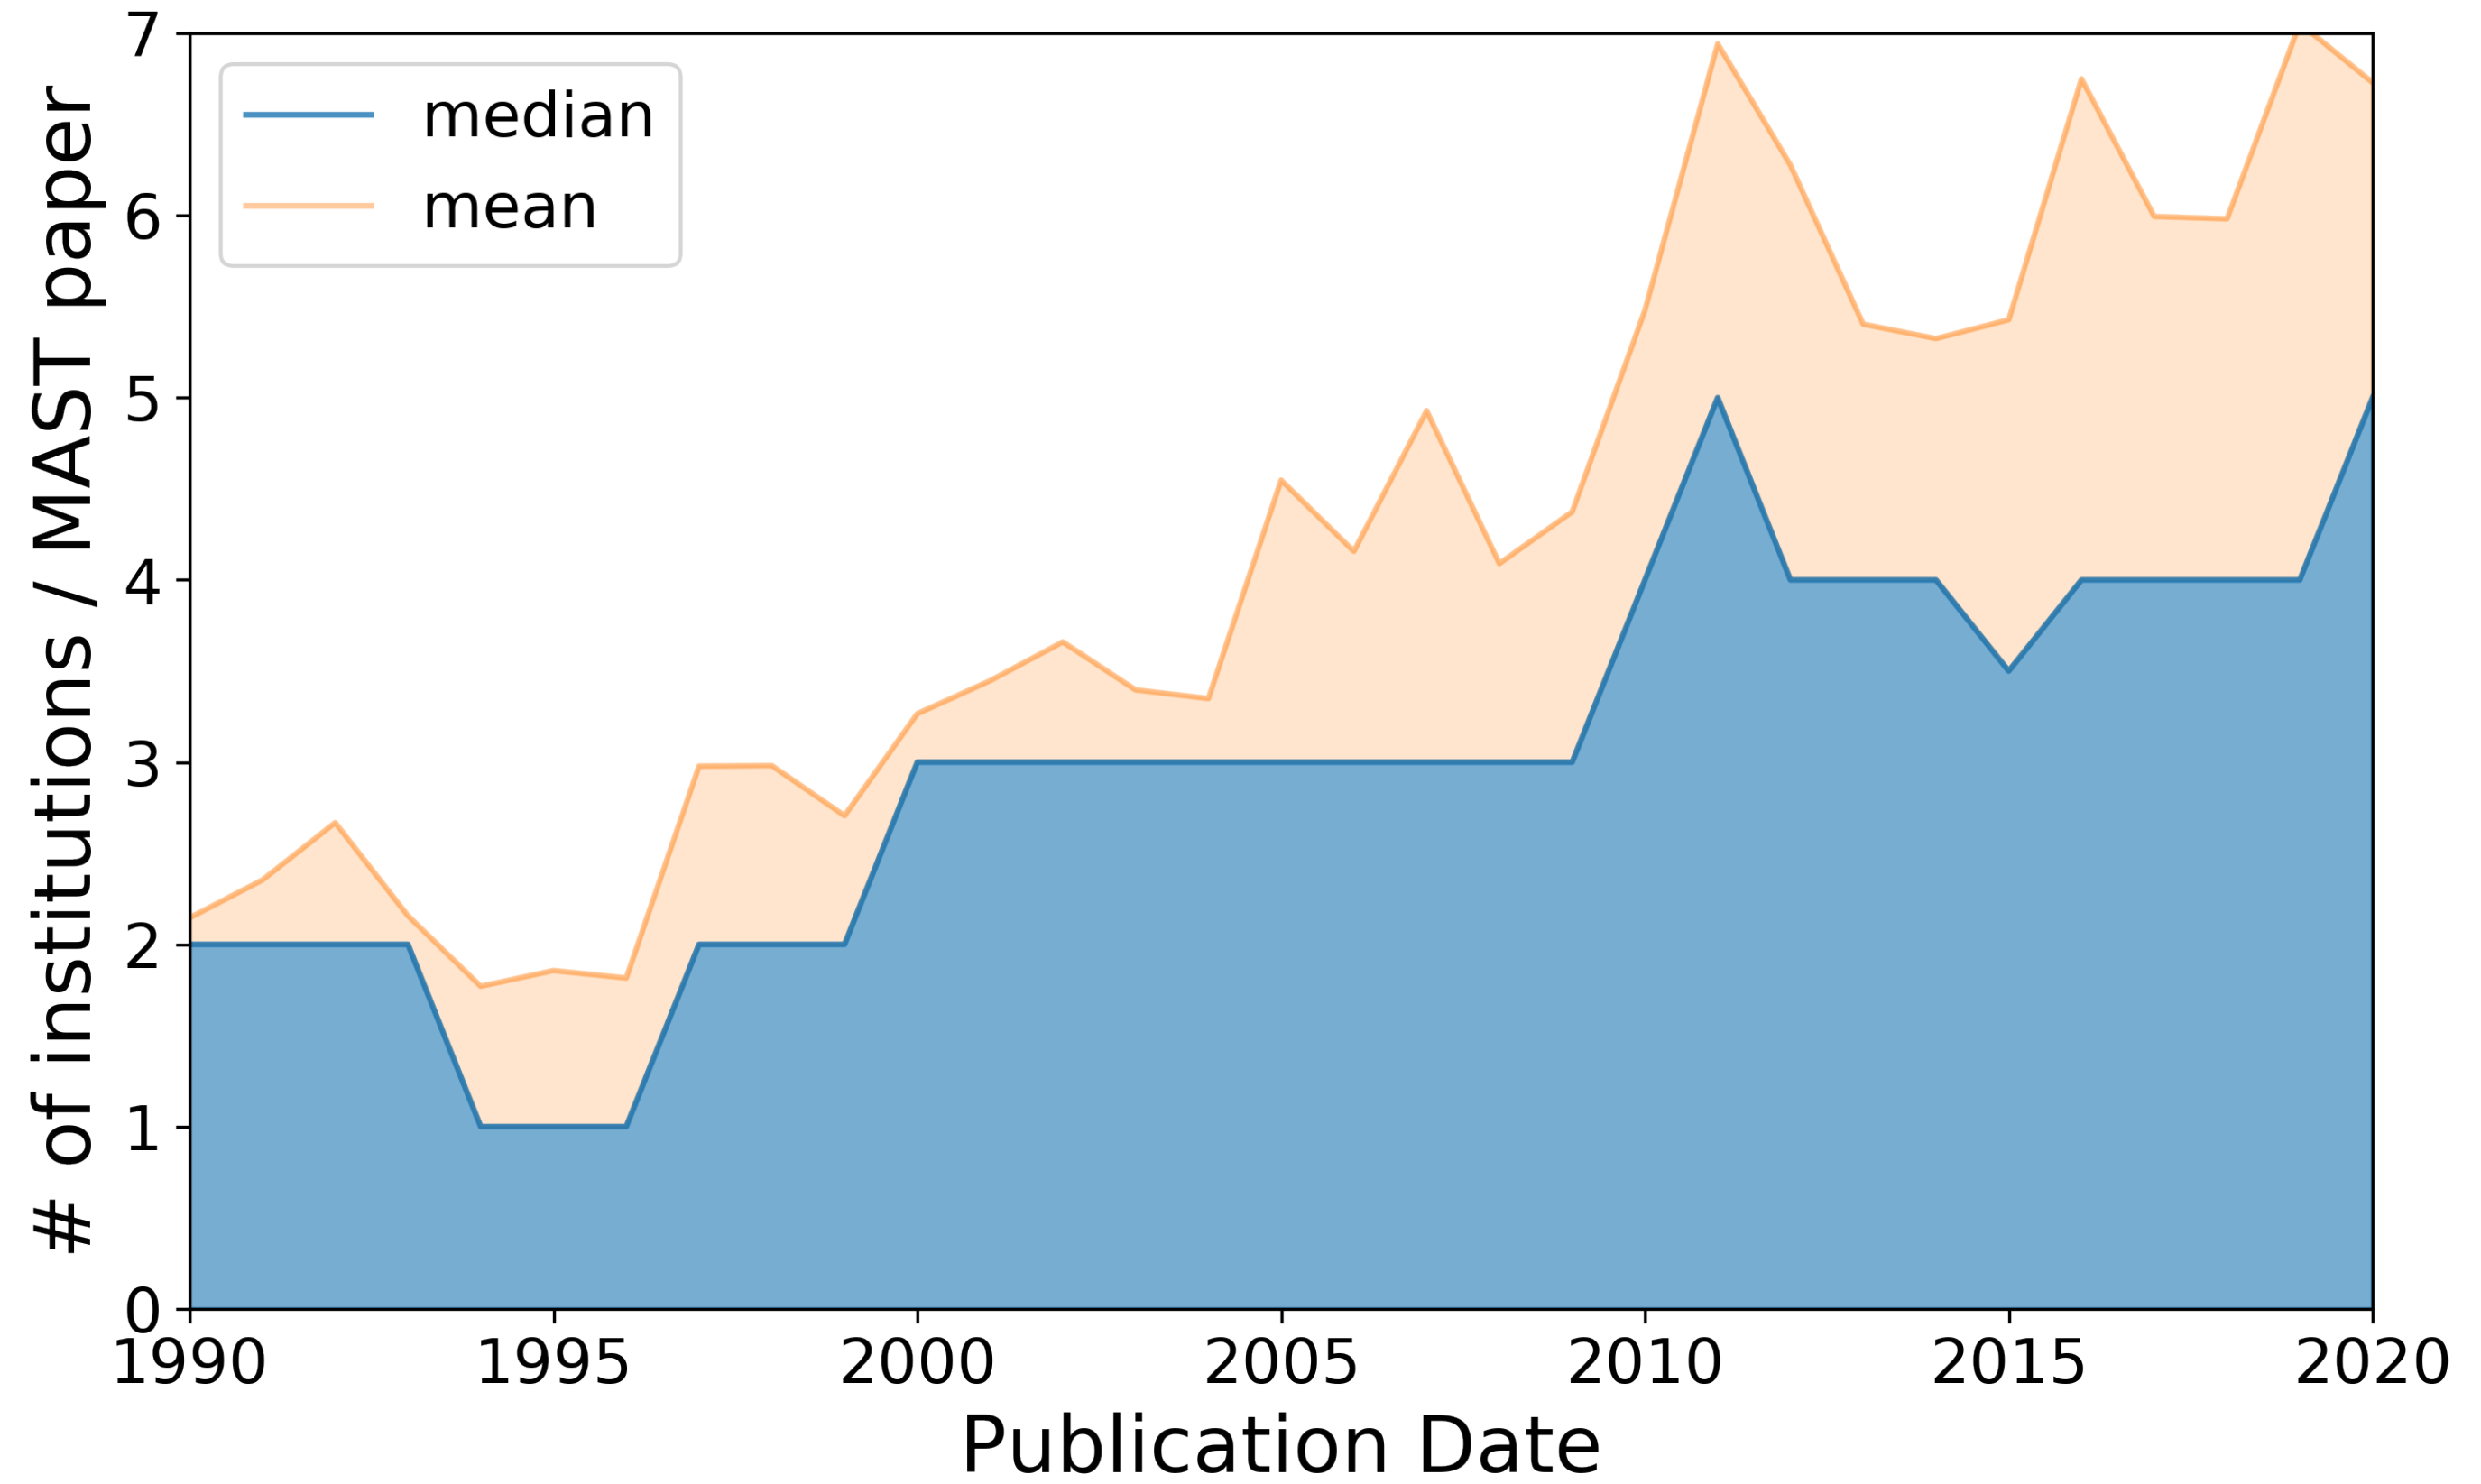

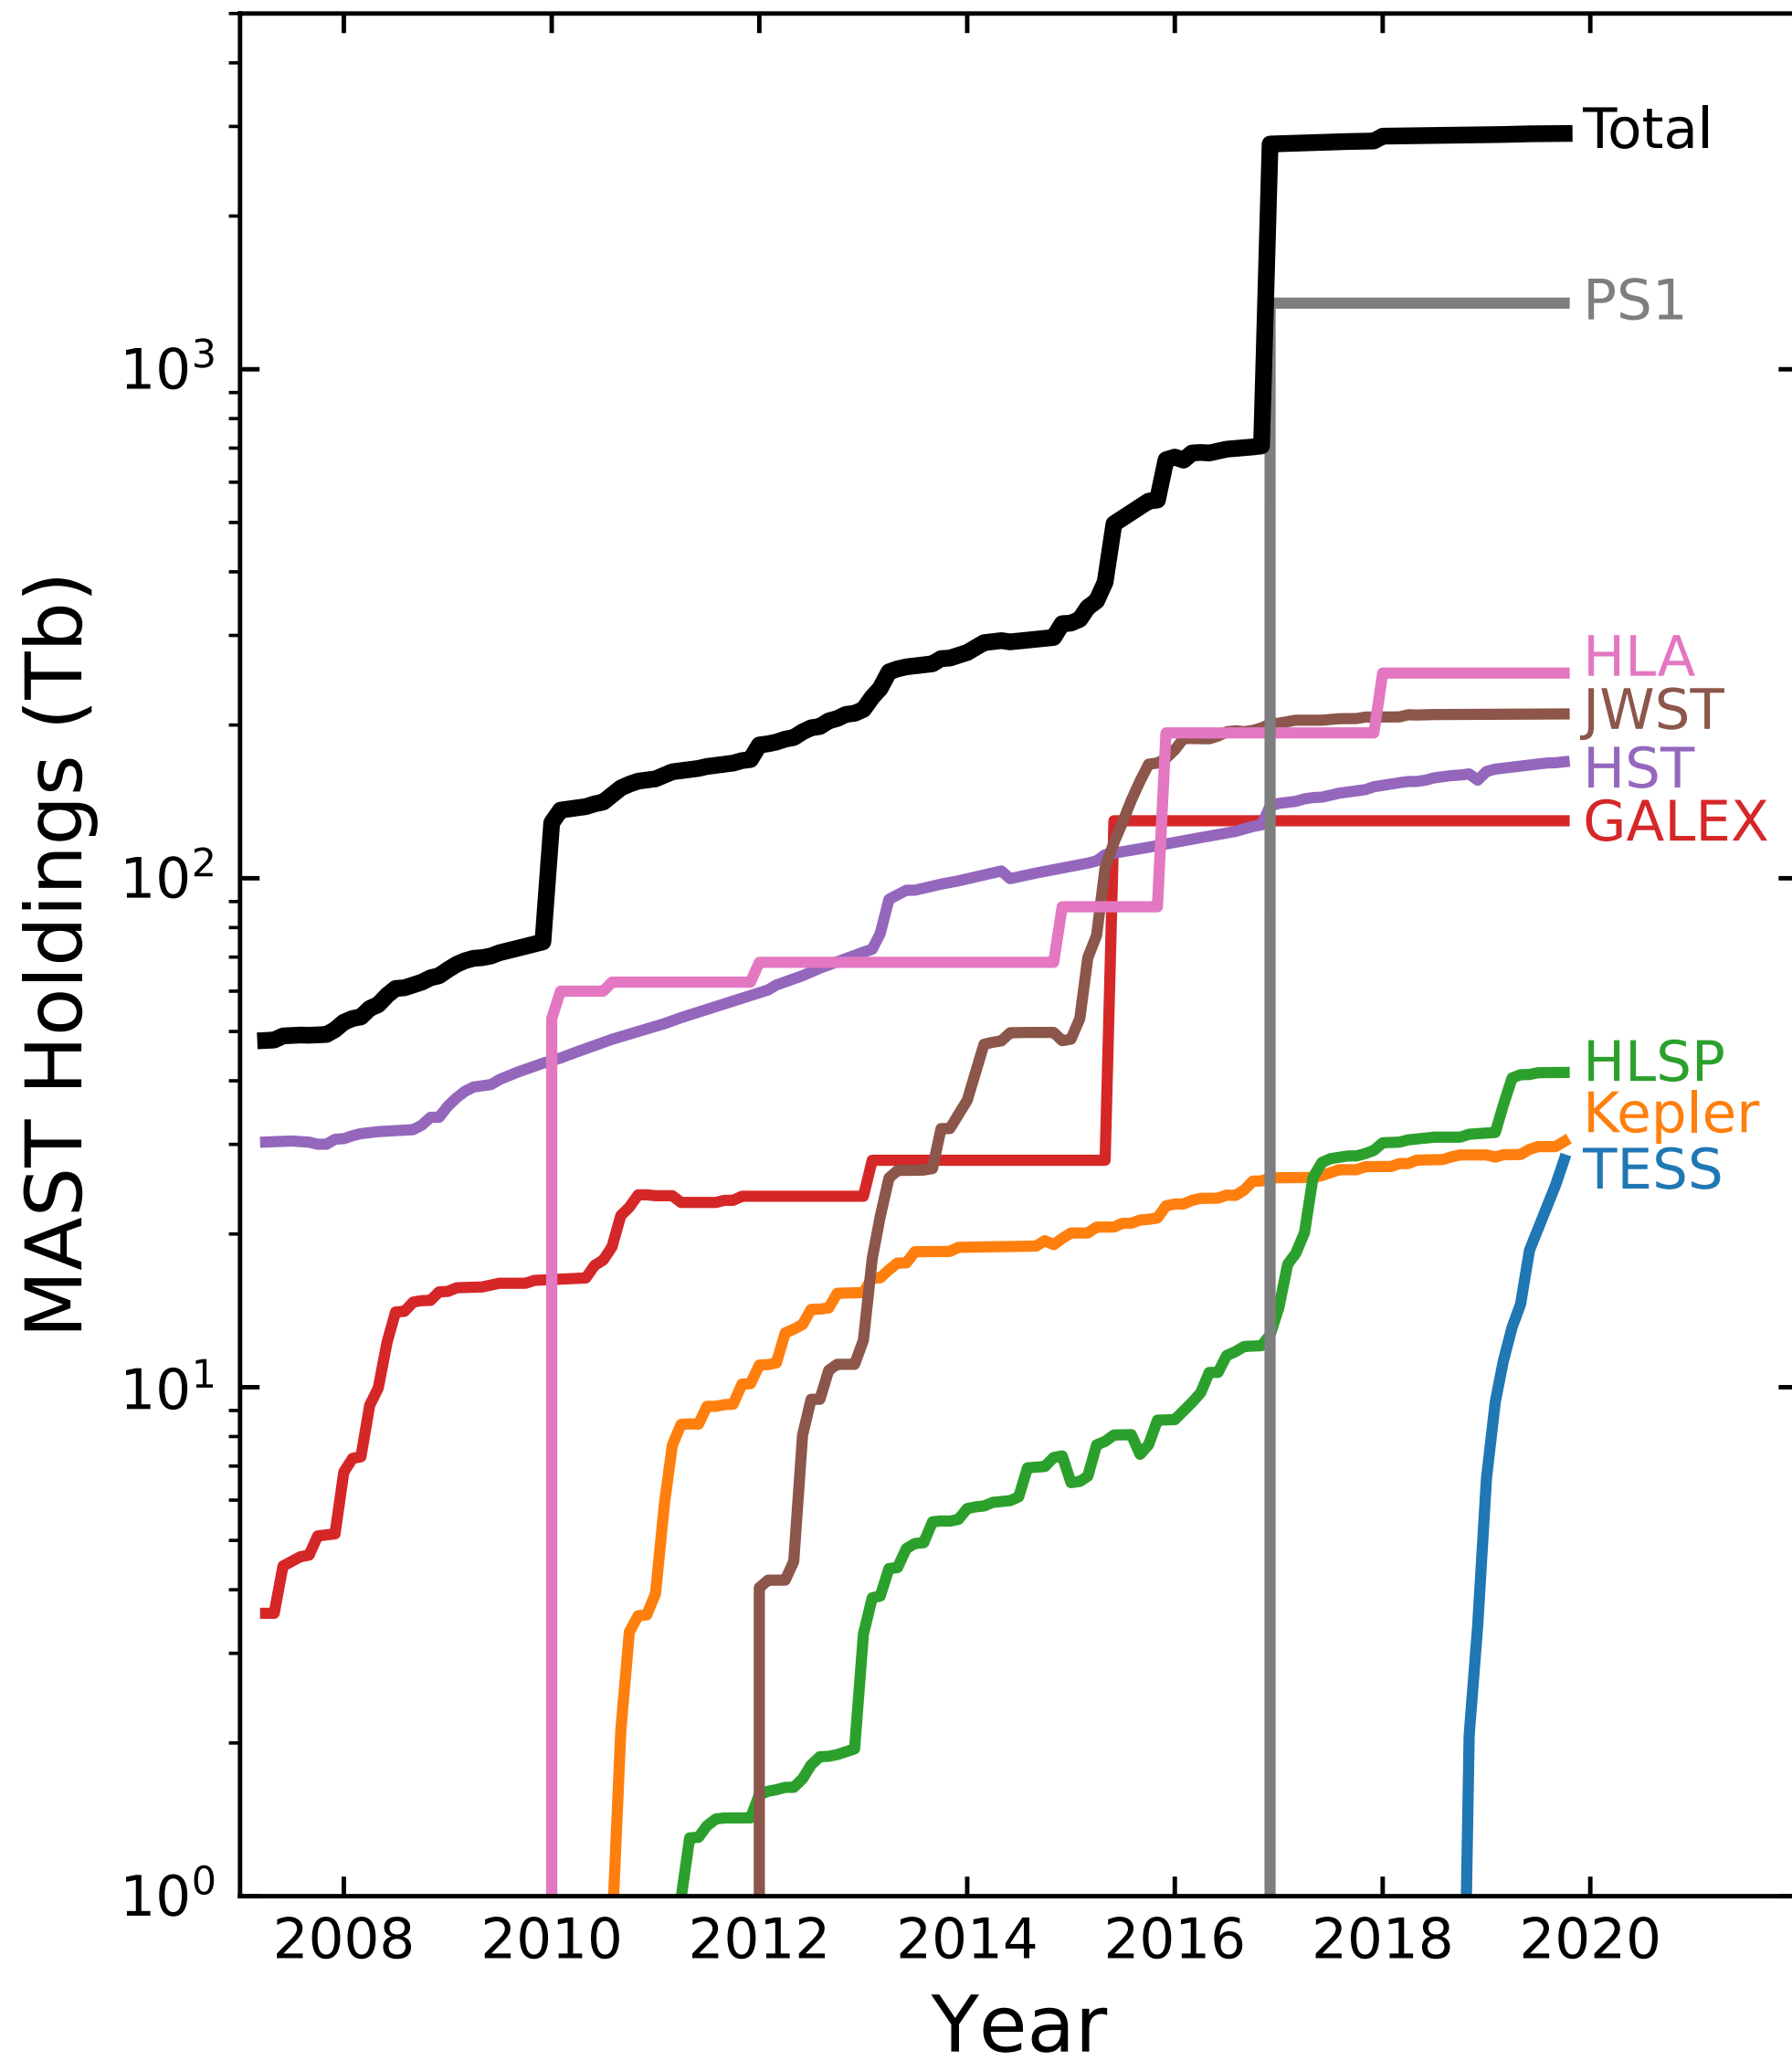

Early Evolution of a Tidal Disruption Event Measured by TESS

Holoien+ (2019)

The data are getting big & the communities are getting bigger

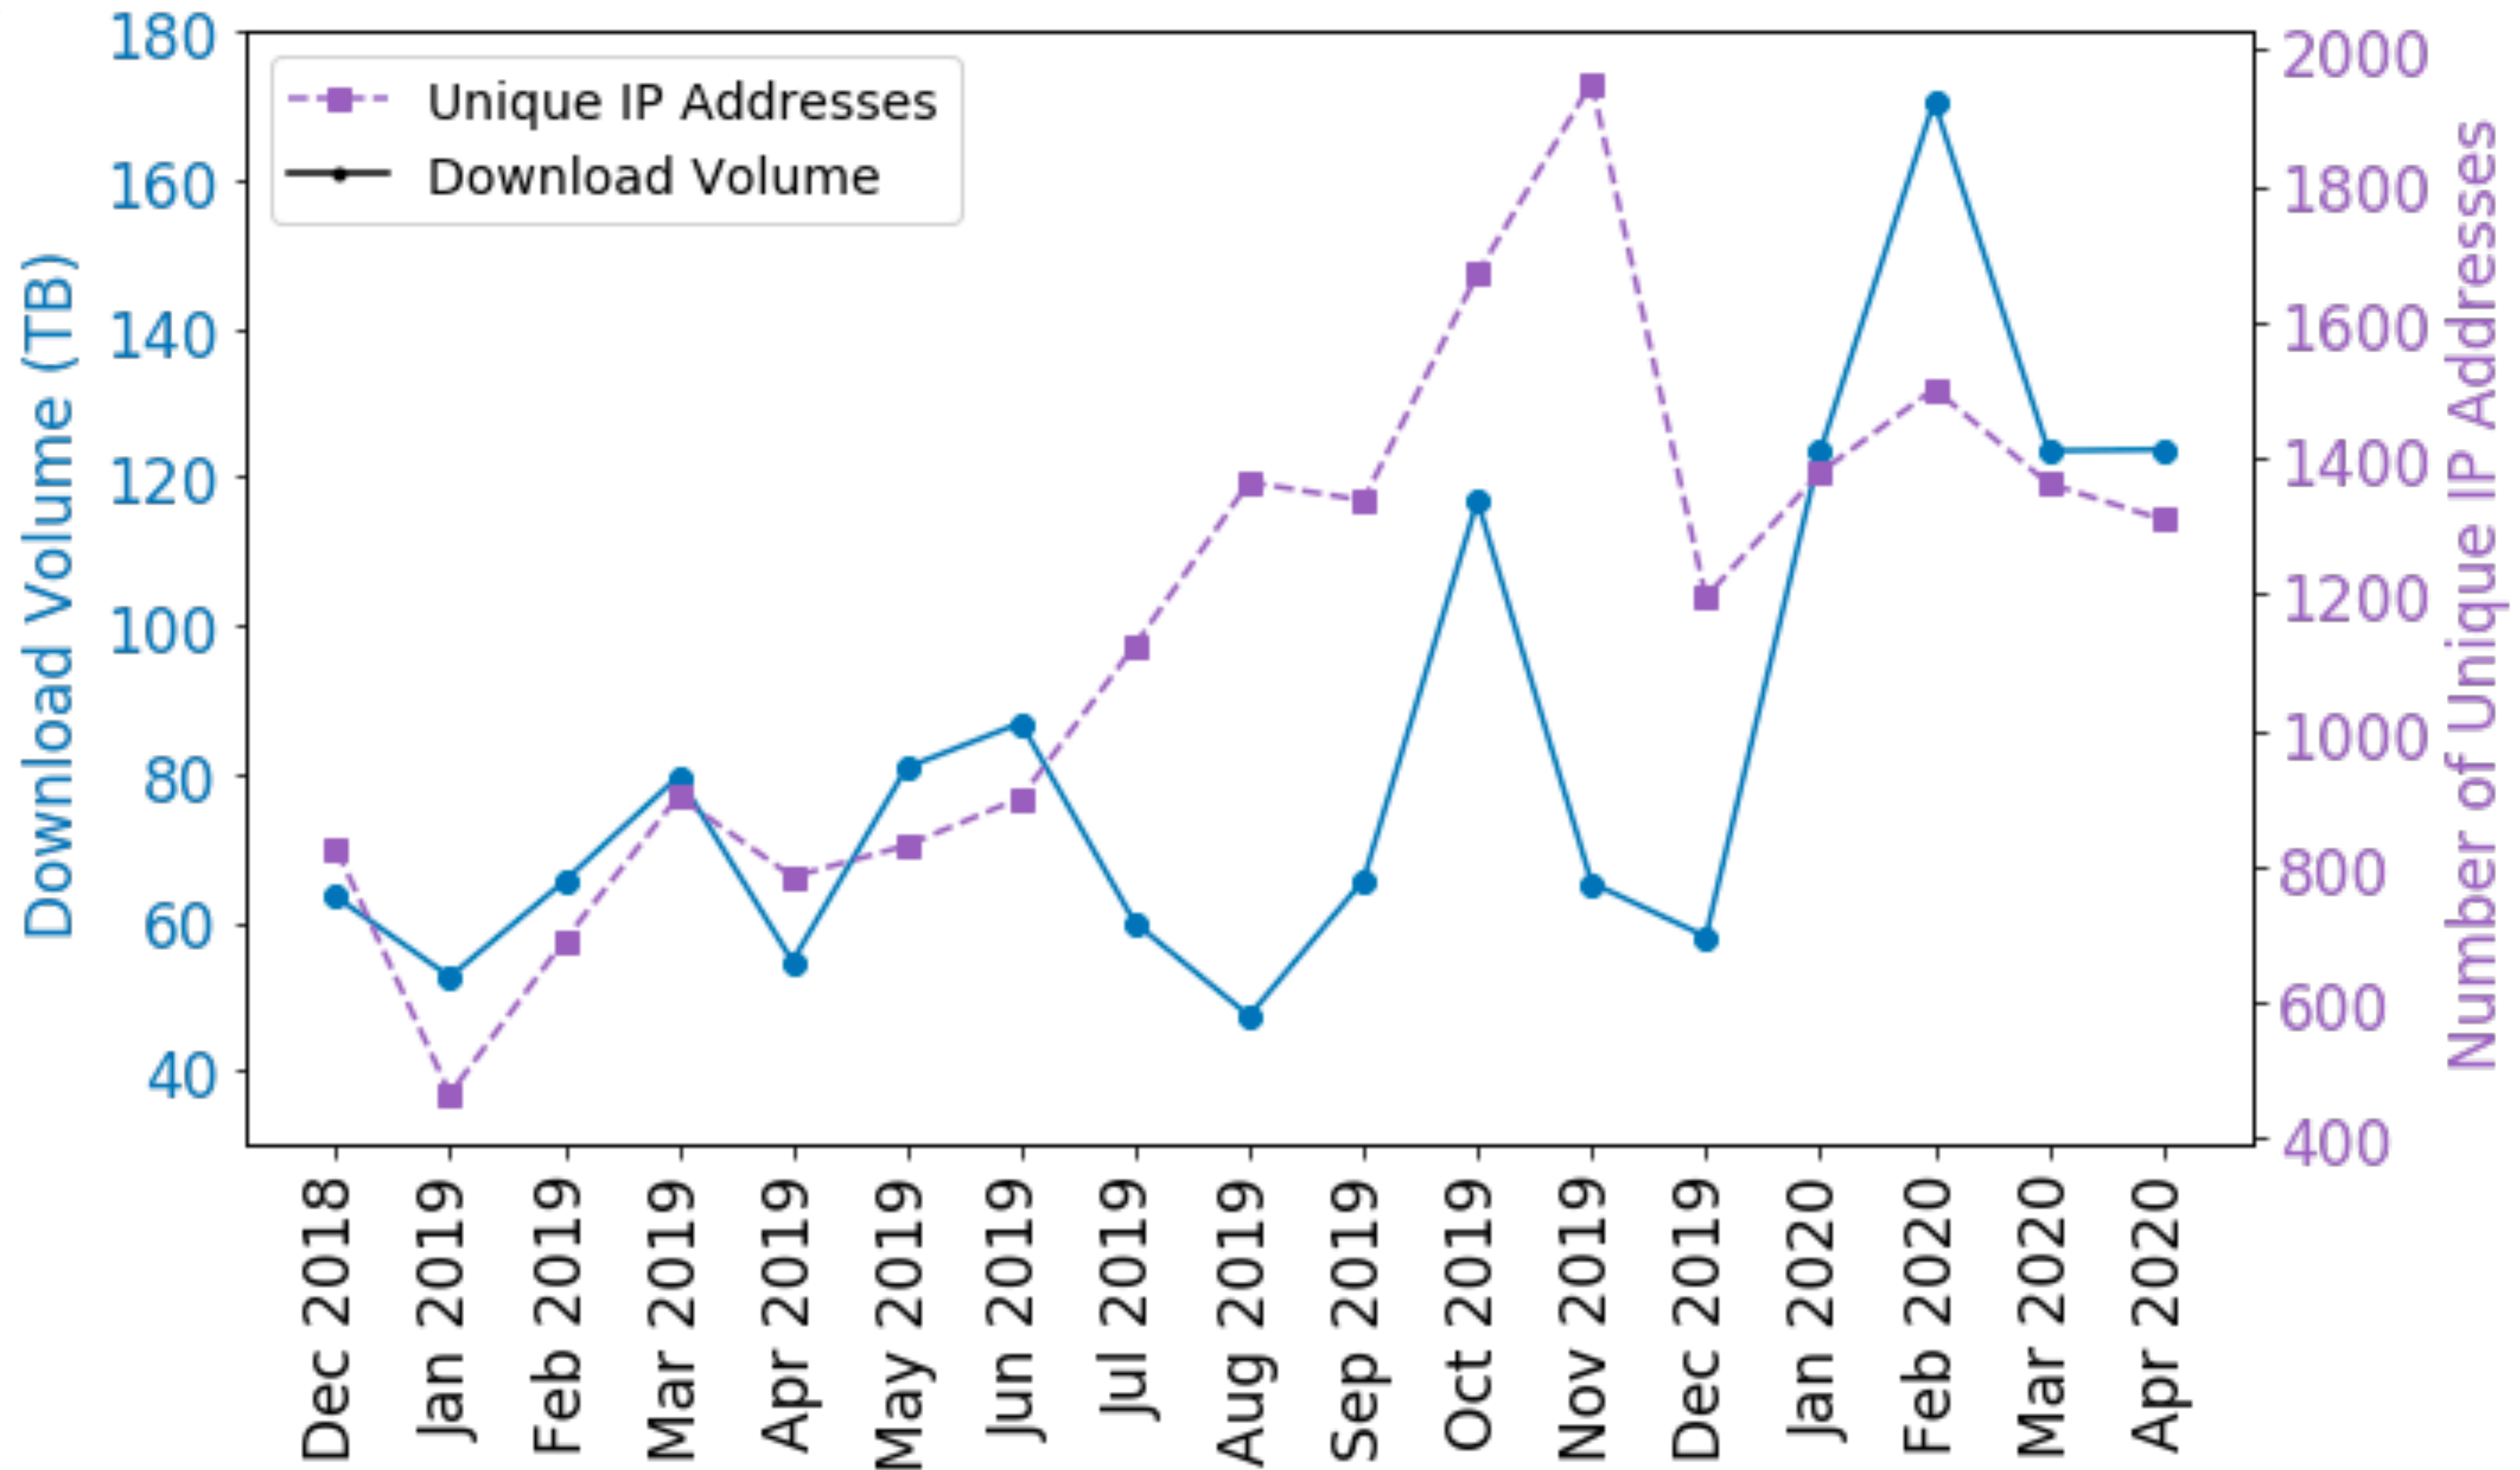

TESS extends MAST's exoplanet and time series data

TESS has a big community with growing data demand

Welcome to the Time series Integrated Knowledge Engine

This [JupyterHub](#) instance running on AWS is intended to allow you to learn new data analysis tools, collaborate with your colleagues in a common workspace, customize data visualizations, and ultimately do research on TESS and Kepler data.

New to JupyterHub, take this [quick tour](#).

This platform is pre-loaded with python software packages and Jupyter notebook tutorials that teach how to do research with the TESS and Kepler Data (see the directory `notebooks/` on the left). We use git to pull new and updated notebooks into this instance, so if you decide to alter these notebooks for your own purposes (and we hope that you do), you should first make a copy for yourself.

interm_tesscut_dss_overlay Updating logos to point to shared path

interm_tesscut_requests downloading only one sector's cutout

Peter Plavchan @PlavchanPeter · Dec 7, 2018

I'm just going to put this out there now so I don't get scooped. We confirmed our predicted single transit event of a Jovian planet around AU Mic in the TESS sector 1 data. Working on the paper right now. We found this with NIR RVs, and this confirms it.

23 27 187

Scott Fleming @ScottWFleming · Dec 7, 2018 congratulations!
