The Search Bar

On this page...

- The "Clear Form" Button
- The "Search" Button
- The "Show API" Button

Component Overview

This section describes the Search Bar, which is available at the bottom of the Search Form.

Component Features and Functionality

The Search Bar consists of three buttons: '**CLEAR FORM**', '**SEARCH**', and '**SHOW API QUERY**'.

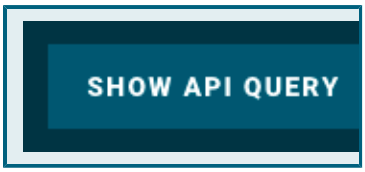

The "CLEAR FORM" Button

'CLEAR FORM' resets the form to its default values: all changes made to the form are removed. Use this button to start a new search.

The "SEARCH" Button

'SEARCH' submits the query as entered in the search form and shows the results in the Search Results Table.

The "SHOW API QUERY" Button

'**SHOW API QUERY'** opens an overlay with a written, programmatic-based query, which can be used in a terminal or included in programming scripts. The API queries shown in the overlay match the search constraints specified in the search form.
