Data Retrieval in a Nutshell

Once observations have been selected in the Results Table, the following workflow describes how to retrieve specific files.

for one of the observations to initiate a download, or

- Check one or more observations and click the Add to Basket icon
 Apply zero or more filters to select or limit categories of file types
 - Check one or more directories or files in the *Files* panel
 - Optionally add calibration reference files
 Click one of the buttons to select your download method
 - o Initiate the download

The subsections of this chapter provide details about how to perform these steps.
