## Component Overview

The '**Core Search Parameters**' section contains the most common search parameters for the selected data collection, which can vary between the different collections. This page overviews the types of search components and how to specify parameter constraints for components that can be found on multiple data collections.

### Parameter Constraint Syntax

There are three categories of search parameters: string (i.e. text), numeric, and datetime. There are thus three slightly different syntaxes when adding additional conditions to a parameter. The specifications outlined below apply equally to [core parameters](#), [additional search parameters](#), and any mission-specific fields.

Hovering over a filter box in the search form will show "tooltips" on using search conditions.

### Parameter Constraints: String Fields

How to specify constraints for search components that accept strings: search conditions, valid formats, and some examples.

Search Operation	Format	Example
Exact match	abc	<p>Dataset ID, e.g. ICDM79040</p> <p>Dataset Name=</p> <p>ICDM79040</p>
		<p>Names of Filters/Gratings, e.g. G130M or POL60UV;PR200L</p> <p>Filters / Gratings=</p> <p>F8ND;F220W;CLEAR3;CLEAR4</p>
		<p>Add or remove additional columns to filter results</p> <p>Column Name=</p> <p>Operating Mode</p> <p>Condition=</p> <p>SPEC</p> <p>X</p>

Wildcard	*ab*c	<p>Dataset ID, e.g. ICDM79040</p> <p>Dataset Name= <input type="text" value="X*E*0T"/></p>

Names of Filters/Gratings, e.g. G130M or POL60UV;PR200L

Filters / Gratings=

F1\*W

Multiple	abc, def _____ ab*, def _____ abc, de*, fg*	<p>Dataset ID, e.g. ICDM79040</p> <p><b>Dataset Name=</b> <input type="text" value="Z06A0101R,I9ZF01010"/></p>
Exclude	!abc _____ !ab*c _____ !abc,!def _____ !ab*,!cd*	<p>Names of Filters/Gratings, e.g. G130M or POL60UV;PR200L</p> <p><b>Filters / Gratings=</b> <input type="text" value="!G130M"/></p>

Type ahead	character or character string	

--	--	--

## Parameter Constraints: Numeric Fields

How to specify constraints for search components that accept numeric data types (integer, float): search conditions, valid formats, and some examples.

Search Operation	Format	Example
------------------	--------	---------

Exact Number	any number	<p>Exposure duration in seconds, e.g. 1200</p> <p><b>Exposure Time=</b> <input type="text" value="1000"/></p>
	= any number	<p>Exposure duration in seconds, e.g. 1200</p> <p><b>Exposure Time=</b> <input type="text" value="= 14660"/></p>

Comparison	> number _____ >= number _____ < number _____ <= number	<p>Add or remove additional columns to filter results</p> <p>Column Name= Spectral Res ▾ Condition= &gt;= 20000 X</p>
------------	---	---

Range	num1 .. num2	<p>Add or remove additional columns to filter results</p> <p>Column Name= RA (J2000) Condition= 15.0567 ..17.6709 X</p> <p>Column Name= Dec (J2000) Condition= -10.00 .. 5.56 X</p>
-------	--------------	---

Calculated Range	num1 +- num2 <hr/> num1 +- num2%	<p>Add or remove additional columns to filter results</p> <div style="display: flex; justify-content: space-between;"> <div style="width: 45%;"> <p>Column Name= Exp Time</p> </div><div style="width: 45%;"> <p>Condition= 400 +- 300</p> </div></div> <div style="margin-top: 10px;"> <p>Column Name= Central Wavelength</p> </div> <div style="display: flex; justify-content: space-between;"> <div style="width: 45%;"> <p>Condition= 3000 +- 15%</p> </div><div style="width: 15%; text-align: right;"> <span>X</span> </div></div>
------------------	-------------------------------------	---

## Parameter Constraints: DateTime Fields

How to specify constraints for search components that accept dates or times: search conditions, valid formats, and some examples.

Search Operation	Format	Example
------------------	--------	---------

Exact date /time	<p>yyyy-mm-dd</p> <hr/> <p>yyyy-mm-dd hh: mm:ss</p>	<p>Find data observed on or between these dates</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="padding: 2px;">Obs Start Date=</td><td style="padding: 2px; text-align: center;">2010-06-09 </td><td style="padding: 2px;">Time=</td><td style="padding: 2px; text-align: center;">00:00:00 </td><td style="padding: 2px;">to</td><td style="padding: 2px;">Obs Start Date=</td><td style="padding: 2px; text-align: center;">2010-06-13 </td><td style="padding: 2px;">Time=</td><td style="padding: 2px; text-align: center;">03:15:00 </td></tr> </table> <hr/>	Obs Start Date=	2010-06-09	Time=	00:00:00	to	Obs Start Date=	2010-06-13	Time=	03:15:00
Obs Start Date=	2010-06-09	Time=	00:00:00	to	Obs Start Date=	2010-06-13	Time=	03:15:00			
Comparison	<p>&gt; yyyy-mm-dd</p> <hr/> <p>=&gt; yyyy-mm-dd</p> <hr/> <p>&lt; yyyy-mm-dd</p> <hr/> <p>&lt;= yyyy-mm-dd</p>	<p>Add or remove additional columns to filter results</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="padding: 2px;">Column Name=</td> <td style="padding: 2px; text-align: center;">Release Date </td> <td style="padding: 2px;">Condition=</td> <td style="padding: 2px; text-align: center;">&lt;= 1999-10-21 </td> </tr> </table>	Column Name=	Release Date	Condition=	<= 1999-10-21					
Column Name=	Release Date	Condition=	<= 1999-10-21								

<p>Range</p> <p>yyyy-mm-dd .. yyyy-mm-dd</p> <hr/> <p>yyyy-mm-dd hh:mm:ss .. yyyy-mm-dd hh:mm:ss</p>	<p>Add or remove additional columns to filter results</p> <p>Column Name= Archive Date Condition= 2010-05-10 .. 2010-06-30 X</p>
--	--

#### Examples of Spectral Element Searches

Operation	Examples	Note
Exact match	G130M	Type an exact name of the filter, grating, or the combination filter set to retrieve only observations associated with the input string.
	MIRRORA	
	POL120UV; F330W	 Combination filter sets are delimited by a semicolon (;). Remember that combination sets are <b>single</b> strings.
	F2ND; CLEAR2; F1ND;F372M	
Wildcard	G*M	This example retrieves observations that used grating names starting with 'G' and ending with 'M' such as 'G150M' or 'G220M'.
	F81*	Since a combination filter set is considered as a single string, the input wildcard characters 'F81*' retrieve all observations associated with the filter 'F814W' and the other ones such as 'F814W;POLQN18 and 'F814W;F791W'.
Multiple	G130M, F550W	The 'Multiple' operator (',') acts as the logical operator 'OR'. Thus this example retrieves observations used the grating 'G130M' or the filter 'F550W'.
	F550W, POL60UV; PR200L	This example retrieves observations used the filter 'F550W' or the combination filter set 'POL60UV;PR200L'.   Be sure to use the 'Multiple' operator, comma (,) not a semicolon (;) used for appending filters for combination filter set names.
Exclude	!F550W	This operation excludes any observations using the filter 'F550W'.
	G*,!G140L	This search retrieves observations using all grating options ('G*') except the grating 'G140L'.
Type ahead		 <b>Type ahead limitation</b> Note that this only shows a list of single spectral elements and not combination filter sets.
