

Retrieving Data

In this chapter...

Data Retrieval in a Nutshell

Once observations have been selected in the Results Table, the following workflow describes how to retrieve specific files.

- Click a file icon  for one of the observations to initiate a download, or
- Check one or more observations and click the **Add to Basket** icon 
 - Apply zero or more **filters** to select or limit categories of file types
 - Check one or more directories or files in the **Files** panel
 - Optionally add calibration reference files
 - Click one of the buttons to select your download method
 - Initiate the download

The subsections of this chapter provide details about how to perform these steps.
