Component Overview

The '**ULLYSES Search Parameter Components**' section contains the search parameters for the ULLYSES HLSP data collection. This page overviews the types of search components and how to specify parameter constraints.

 Filtering data will return targets that include the selected criteria but are not limited to those criteria. For example, filtering by 'Telescope=FUSE' will return targets that include FUSE data *and* data from other telescopes.

Parameter Constraint Syntax

Learn how to specify constraints on search parameters depending on the nature of the input. The following specifications apply for the core search parameters and [Additional Search Parameters](#) in the search form.

 Hovering over each filter box shows tooltips on how to use search conditions.

ULLYSES Search Parameter Components

Telescope

Telescope=

☒ HST

☒ FUSE

☒ LCOGT

By default, all '**Telescope**' options are selected. Toggle the checkboxes to select and/or deselect the Telescope selections.

HST Instruments

HST Instruments=

☒ STIS

☒ COS

☒ WFC3

By default, all '**HST Instrument**' options are selected. Toggle the checkboxes to select and/or deselect the Telescope selections.

Note: If HST is deselected in the Telescope component, the options for this component will be disabled and not included in the filter.

Target Type

Target Type=

☒ LMC

☒ SMC

☒ T TAU

☒ LOW Z

By default, all '**Target Type**' options are selected. Toggle the checkboxes to select and/or deselect the Target Type selections.

HLSP Type

HLSP Type=

☒ SPECTRUM

☒ IMAGE

☒ TIME SERIES

By default, all '**HLSP Type**' options are selected. Toggle the checkboxes to select and/or deselect the HLSP Type selections.

Spectral Band

Spectral band

Wavelength=

☒ FUV

☒ NUV

☒ OPTICAL

☒ NIR

By default, all '**Wavelength**' options are selected. Toggle the checkboxes to select and/or deselect the Wavelength selections.
