

# STScI Town Hall - January 2023, AAS 241

The Space Telescope Science Institute (STScI) serves the astronomical community through the operation of multiple NASA flagship missions including the Hubble, Webb, and Roman Space Telescopes, the development of advanced data and science archives, including Kepler and TESS, and the dissemination of astronomical information to the broadest public audiences. The STScI Town Hall will serve as the center piece for our AAS 241 presence. We report on the status of our existing and upcoming missions and describe new opportunities designed to advance astrophysics through the 2020s. We highlight key initiatives associated with our major missions.

## Speakers

Nancy Levenson	<a href="#">STScI overview</a>
Jason Tumlinson	<a href="#">What comes next - HWO and the Future Great Observatories</a>
Karoline Gilbert	<a href="#">Community Definition of Roman's Core Community Surveys</a>
Julia Roman-Duval	<a href="#">Overview and Status of the ULLYSES Director's Discretionary Time Program</a>
